

# Study Verification Test

## Student Report

This is an interpretive report of your responses to the Study Verification Test. Its purpose is to help you identify your student profile within specific topics.

The boxplots show how you compare to a larger sample of first semester Medialogy students from Aalborg and Copenhagen. Specifically, they indicate the average self-ratings of all students in seven different topics and the reported study hours per week, illustrated as boxplots. Your self-reported value for each topic is indicated with red dots. A value less than 0.5 means that you rated yourself lower than the average student. The percentiles indicate the percentage of students whose scores are equal to or less than yours. Based on these results we have created specific recommendations for you to get more comfortable in the Medialogy study environment.

As the report is based on the questionnaire information alone, it may give only a rough indication of your true attitudes. Your advisor or student counselor will help you understand your scores and find the services you desire.

## Specific Recommendations

In this section you will receive a more detailed explanation of your results. The purpose of this information is to help you develop your skills and get the most from your university experience. Take a balanced approach to reviewing and utilizing this information. Do not assume that each statement is perfectly accurate just because it is printed in a formal manner; some statements may not fit you well. However, do not dismiss a statement just because it points to a challenge.

Keep an open mind as you consider each statement. When it seems accurate, give serious thought to any suggestions that accompany the statement. If the statement is puzzling, discuss it with someone who can help you interpret it. Approaching the information in this way can be very helpful.

## Social Support for Studying

Studying is a long-term endeavour and there will be times of frustration and doubt. Your self-reported social support for studying placed you in the 27th percentile, and your responses suggest that you enrolled for a university degree in general and Medialogy at AAU specifically without having received a large amount of encouragement from friends, family, or other sources. During your education it can help to have a social network that understands that times of frustration can be part of pursuing a higher education degree. Your social network can support you in times of hardship, doubt, and low morale. Making friends with fellow students at university can be a valuable source to rely on throughout the education. Taking active part in student unions, being a volunteer at events, or other types of student environment activities can aid this. It will broaden your social reference beyond your own semester or education. Breaking the barrier to seek social network outside your own semester can seem daunting, but can become a significantly positive part of your years as university student. If in doubt about how to initiate or engage, consider having a chat with your student counselor. It is good to hear that you have already made some friends at AAU.

## High School Habits

In high school, the teacher often has the responsibility of giving homework, communicating learning material, and recording attendance in class. Your self-reported high school habits placed you in the 15th percentile, which suggests that you can majorly benefit from reflecting on your study habits. As a student at university, you have the responsibility for what you learn. Your lecturers will often have more focus on academic content than on pedagogy, and weak study habits can therefore set you back in your learning progress and potential. A personal reflection on how you may need to change your habits for university, can result in more efficient work, a much better study life experience, and a much higher quality skillset. Remember, when you graduate after 5 years of studies, you need to have placed sufficient effort, gained sufficient experience and acquired sufficient knowledge, to be confident in your abilities. If your habits have been holding from your potential, you might not have the credentials for field-relevant or interesting jobs. You will then have wasted 5 years of your potential, that you will never get back. Ergo; start visualizing the prospects you believe your education should provide for you, by the end of the student journey. Use that to fuel your habit change, direct your ambition, as well as your sense of personal responsibility for your future.

## Study Habits

Weak study habits are the single greatest cause of academic problems at university. Your self-reported study habits placed you in the 34th percentile, and you will benefit from adopting more good study habits. As soon as possible, develop a clear daily routine in which you set aside certain periods of time to study. Learn to focus your attention and to pace yourself. Find the situations or circumstances, where your attention is challenged or removed from otherwise study-allocated time or activity. Examples can be sitting too far back during lectures to keep focused attention, or multitasking too many activities to keep the mind from wandering from the subject matter, during homework sessions. Other useful techniques include previewing, underlining, note-taking, and reviewing. Academic counselors can help you develop your study habits and exercises for keeping

focus. You can find a set of helpful tools to improve your study habits [here](https://tinyurl.com/AAUstudyPlanning) (tinyurl.com/AAUstudyPlanning) and find study related exercises [here](https://tinyurl.com/AAUstudySkillsExercises) (tinyurl.com/AAUstudySkillsExercises).

## Grit

Talent without hard work rarely amounts to anything ambitious. Making the effort to stay with a problem (or challenge) for long enough, increases your chances of cracking it and mastering new skills. This requires time and dedication, and is known as grit. Students with high self-reported values in grit, are less likely to drop out and fail exams than those with lower scores. Your self-reported grit places you in the 27th percentile, and it appears you would benefit from more perseverance and dedication to solving problems, achieving study goals, etc. Previous Medialogy cohorts have shown that no matter the high school diploma, students can make it through the education if they persist, and invest the time and effort. Grit is a part of university life. Despite being a demanding part, it is often also what leads to rewarding experiences and new skill sets. Remember this next time you encounter a difficult problem and you feel like giving up. Clear your distractions, be tenacious, and keep grinding.

## Growth mindset

Seeing your intelligence as something that you can actively influence and grow is referred to as having a growth mindset. Students with high self-reported values in growth mindset are less likely to drop out and fail exams than those with lower scores. Your self-reported understanding of intelligence placed you in the 59th percentile, meaning that you are open to actively improving your intelligence. Seeing setbacks (failed assignments or poor exam grades) as an opportunity to learn and grow rather than inadequacy, lack of intelligence or talent helps you overcome challenges and develop a positive learning attitude.

## Study and Work

Studying requires a lot of time and dedication in order to succeed. Being intelligent and having talent can help but does not replace the need for dedicating time and effort to studying. The ECTS system assumes that you spend 45 hours a week on your education. You reported using 55 hours weekly for studying, which indicates that you are using sufficient amount of time for studying. Meeting these demands is difficult over long-term with too many other obligations. You reported using 0 hours on study related work, and 10 hours on non-study related work. Should you not able to dedicate around 45 hours to study each week, you should not despair when you fail exams. You simply did not have the time resources to succeed and studying might take longer than expected. However, if you mainly rely on SU this provides a clear time frame within which you need to finish your education. You should therefore carefully review your commitments and other activities that you need or want to dedicate time to vis-À-vis the study demands. You should therefore carefully review your commitments and other activities that you need or want to dedicate time to vis-À-vis the study demands.

## Understanding of Medialogy

Choosing a suitable education can be difficult, and students should reflect on their choice of education, especially, in the first semester(s). Your understanding about what you will learn in the Medialogy programme is in the 14th percentile, meaning that your understanding of Medialogy is rather different from what the study plan indicates. Medialogy has a strong technical foundation but offers many other skills and competencies that give you opportunities to design novel technologies and this usually involves programming. Contrary to what you indicated in the study verification questionnaire Medialogy students learn only little about: manual content creation, work with aesthetics, professional moving making, and working as a rigging artist. Although you have group responsibilities related to you project, the group is not responsible of the individual learning goals, defined in the study plan. Previous students with different expectations either learned to appreciate the content and opportunities of a Medialogy degree or changed to other programmes or educations. Attending the Med Awards event (usually in November) and seeing other student projects can give you an

idea of what you will be able to do if you apply yourself to what Medialogy can offer. Contacting older students in the Medialogy facebook group, study counselors, and going to the study cafe can also provide you information about the education and what it means to be a Medialogy student. You can find information about Medialogy and student testimonials [here](https://tinyurl.com/AAUaboutMedialogy) (tinyurl.com/AAUaboutMedialogy).
